

Manni-Plex® Zn

Advanced Foliar Nutrition

MANNI-PLEX ZN is a proprietary foliar supplement that provides highly mobile and available zinc to plant growing points. It is an excellent tool for preventing and correcting zinc deficiencies, and enhancing overall plant health.

Zinc is one of the most common nutrient deficiencies. Applying MANNI-PLEX ZN during the growing season helps ensure that adequate levels of zinc are present. It also helps improve resistance to root infections such as *Fusarium Graminerum*, *Gaumannomyces* and *Rhizoctoniasolani*.

MANNI-PLEX® ZN Advantages

- More efficient than other forms of Zn
- Low molecular weight and particle form allows more Zn to penetrate plant leaves and translocate to growing points
- Proprietary formulation coats leaves and adheres to the leaf surface, making it available to the plant longer
- Ready-to-use liquid formulation can be tank mixed with most fungicides, insecticides and PGR's
- Zinc plays a role in the growth and development of the plant's tissue, roots and vascular system. It is also critical to protein synthesis and structural integrity.

The molecular shape and structure of MANNI-PLEX® foliar nutrients allows the plant to absorb more nutrients at a faster rate.

Guaranteed Analysis

3-0-0

Total Nitrogen (N)	3.0%
2.8% Nitrate nitrogen	
0.2% Urea nitrogen	
Zinc (Zn)	7.0%
7.0% Water soluble zinc	

Derived from zinc nitrate and urea.

Application and Use

Field, Row, Vegetable, Fruit, Tree and Vine Crops: Apply 1-2 quarts per acre per application throughout the growing season. At least 3 applications are recommended. More frequent applications at 1.5 quarts per acre may be needed to correct deficiencies once they occur. For pre-plant or sidedress applications, use 1-2 gallons per acre.

Ornamental Crops: Apply 1-2 quarts per 100 gallons water. Cover foliage thoroughly to point of runoff.

Optimum rate of application will vary depending on soil properties (such as pH, organic matter content, texture); weather conditions, time of year, general crop health and crop species. For best results, follow soil test or plant analysis recommendation.
