

Manni-Plex® K

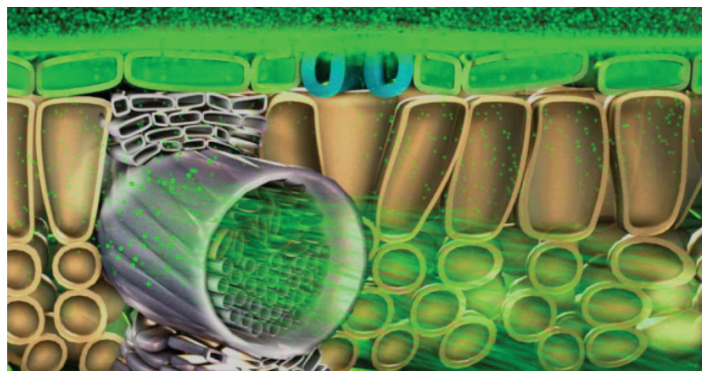

Advanced Foliar Nutrition

MANNI-PLEX K is a proprietary foliar supplement that provides highly mobile and available potassium nutrition to plant growing points. It is an excellent tool for preventing and correcting K deficiencies, and enhancing overall plant health.

Applying supplemental MANNI-PLEX K during the growing season helps ensure that adequate levels of K are present.

The MANNI-PLEX® K Advantage

- More efficient than other forms of potassium
- Low molecular weight and particle form allows more K to get into plant growing points
- Proprietary formulation coats leaves and adheres to the leaf surface, making it available to the plant longer
- Ready-to-use liquid formulation can be tank mixed with most fungicides, insecticides and PGR's

The molecular shape and structure of MANNI-PLEX® foliar nutrients allows the plant to absorb more nutrients at a faster rate.

Application and Use

Field, Row, Vegetable, Fruit, Tree and Vine Crops: Apply 2-5 quarts per acre per application throughout the growing season. At least 3 applications are recommended. More frequent applications at 1.5 quarts per acre may be needed to correct deficiencies once they occur. For pre-plant or sidedress applications, use 1-2 gallons per acre.

Ornamental Crops: Apply 1-2 quarts per 100 gallons water. Cover foliage thoroughly to point of runoff.

Turf (Commercial): Apply only to actively growing turf. For best results apply early morning or late evening.

Green & Tees: 2-5 fl oz per 1,000 sq ft.

Fairways & Sports Turf: 2.5-6.5 quarts per acre.

Overseeding: 2 fl oz per 1,000 sq ft after germination.

Sod Installation: 2 fl oz per 1,000 sq ft at installation.

Optimum rate of application will vary depending on soil properties (such as pH, organic matter content, texture), weather conditions, time of year, general crop health and crop species. For best results, follow soil test or plant analysis recommendation.
