

GRIGG®

IRON 12-0-0

RATE RECOMMENDATIONS FOR PROFESSIONAL USE ONLY

To prevent or correct nutrient deficiencies, apply GRIGG IRON 12-0-0 as a foliar spray early in the morning or late afternoon. Allow 3-6 hours for drying time before irrigation. Best to apply after mowing.

Cool Season Grasses: Apply 4-12 fluid ounces per 1,000 square feet or 1.25-4 gallons per acre (13-40 liters per hectare) as needed every 7-14 days.

Warm Season Grasses: Apply 6-15 fluid ounces per 1,000 square feet or 2-5 gallons per acre (20-50 liters per hectare) as needed every 7-14 days.

Make frequent applications at lower rates, or apply higher rates at times of greater plant demand. Optimum rate of application will vary depending on treatment interval, soil properties (such as pH, organic matter content, texture), weather conditions, time of year, plant species and its nutrient requirements. For best results, follow soil/tissue test recommendation.

MIXING AND HANDLING INSTRUCTIONS

Agitate before use. Apply in 1-2 gallons of water per 1,000 square feet (44-88 gallons of water per acre) (400-800 liters of water per hectare). Fill mix tank with half of required water volume and begin agitation. Add products in this order, mixing thoroughly after each addition: adjuvants, pesticides, then fertilizers. Fill tank with remainder of water and continue agitation until solution is completely mixed. Check chemical mixture compatibility using a jar test prior to application.
