

## BRANDT Smart Quatro® Plus

# Advanced Nutrient Delivery Technology

BRANDT Smart Quatro Plus is a foliar micronutrient formulation built on proven BRANDT® Smart System® technology. This 5-0-0 solution delivers a balanced blend of boron, manganese, molybdenum, zinc and sulfur through a protected delivery platform designed to improve nutrient uptake and in-plant mobility. Engineered for use in complex tank mixes, BRANDT Smart Quatro Plus helps ensure nutrients remain available in the spray solution and efficiently reach the crop's growing points to support in-season performance.

### Key Benefits of BRANDT Smart Quatro Plus

- **Protected Nutrient Support:** Smart System technology helps prevent nutrient tie-up in the tank, supporting consistent delivery into the plant
- **Targeted Nutrient Support:** Provides a balanced blend of essential micronutrients to support plant structure, metabolic function and overall development
- **Enhanced Uptake and Mobility:** Designed to improve foliar absorption and support movement to active growing points
- **Tank Mix Compatible:** Low salt index formulation designed for complex tank mixes to support crop safety and consistent nutrient delivery

### Guaranteed Analysis

5-0-0

Nitrogen (N) . . . . .	5.0%
5.0% Urea nitrogen	
Sulfur (S) . . . . .	2.0%
Boron (B) . . . . .	0.5%
Manganese (Mn) . . . . .	2.0%
Molybdenum (Mo) . . . . .	0.05%
Zinc (Zn) . . . . .	2.0%

### Plant Nutrient Functions

The nutrient combination is selected to support key physiological processes in crops:

**Boron:** Supports plant structure and flexibility while contributing to vegetative and reproductive growth

**Manganese:** Supports chlorophyll production and photosynthesis, contributing to overall plant energy and function

**Sulfur:** Supports protein and enzyme synthesis essential for plant growth and development

**Zinc:** Plays a key role in root and shoot growth and supports plant response to environmental stress

### Application Recommendations

*Field, Row, Vegetable and Vine Crops:* Apply 1-2 quarts per acre per application throughout the growing season. More frequent applications at 1 pint per acre may be needed to correct deficiencies once they occur.
