

BRANDT® EnzUp® SeedFlow™ Zn

Enzyme Seed Fluency with Zinc

BRANDT EnzUp SeedFlow Zn is a dry enzyme and micronutrient formulation built on patented BRANDT EnzUp technology and SeedFlow delivery technology. It delivers targeted enzymes along with zinc and other micronutrients directly to the seed to support nutrient availability and early root-zone activity by breaking down complex organic materials in the soil. This process helps release nutrients for plant uptake while supporting early root development and microbial activity. The SeedFlow system also improves micronutrient retention on the seed and enhances seed fluency, contributing to more consistent singulation at planting.

Mannanase enzyme - breaks down starches in the exudate that surrounds the outermost layer of the root tips. This draws water and nutrients to the root zone and releases sugars to the plant. This boosts root growth and increases microbial activity.

Lipase enzyme – its primary function is to break down lipids in root exudates and organic residue in the soil allowing for better water flow and nutrient uptake by the roots.

Functioning Agents

Graphite	20%
Talc	30%
Zinc	4%
Fe	0.7%
Mn	0.9%

ALSO CONTAINS NON-PLANT FOOD INGREDIENTS:
 Mannanase 1.0 x 10⁹µUnits/mL
 Lipase 2.0 x 10³µUnits/mL

BRANDT SeedFlow technology dry powder micronutrient encapsulation for improved seed retention and fluency.

- Film forming dry powder
- Improves retention of micronutrients to the seed
- Improves overall seed fluency properties
- Reduces dust-off and residual build-up in planters
- Natural and biodegradable
