**KILLS WARFARIN RESISTANT NORWAY RATS**

This product can only be used to control Norway rats, roof rats and house mice in and within 100 feet of agricultural buildings and man-made agricultural structures constructed in manner so as to be vulnerable to commensal rodent invasions and/or to harboring or attracting rodents infesting. Fences and perimeter baits, except for 100 feet from an agricultural structure as defined above, are prohibited. This product must not be applied directly to food or feed crops. This product may only be applied to active burrows to control Norway rats, and not within 100 feet of agricultural buildings and man-made agricultural structures constructed in a manner so as to be vulnerable to commensal rodent invasions and/or to harboring or attracting rodents infestations that infestations of these rodents have been confirmed. Efforts should be made to remove food trash, garbage, and debris. But must be placed no less than 6 inches into active Norway/rat fur. Do not broadcast bait. Do not use in homes or human residences. Do not place near or inside ventilation duct openings. Do not contaminate water, feed, feedstuffs, feed or rodent handling equipment, or mills or rodent handling equipment or surfaces that come into direct contact with feed. Do not broadcast bait. Where used in USA expected facilities, this product must be applied in tamper-resistant bait stations.

Do not sell this product in individual containers holding less than 8 pounds of bait.

**SELECTION OF TREATMENT AREAS:** Determine areas where rats or mice will most likely find and consume the bait. Generally, these areas are along walls, or in areas between walls, in corners and concealed places, between floors and walls, or in locations where rats or mice or their signs have been seen. Protected bait from rain and snow. Remove as much alternative food as possible.

**APPLICATION DIRECTIONS:**

Rate: Apply 415 lbs of bait (at intervals of 15 to 30 feet) per placement in infested areas. Maintain an uninterrupted supply of fresh bait for at least 10 days or until signs of rat activity cease.

**HOUSE MICE:**

Apply 1/4 to 1/2 oz (1 - 3 1/2 tablespoons of bait per placement of 8 to 12 feet between infested areas. Larger placements (up to 1/2 oz) may be needed at points of very high mouse activity. Maintain an uninterrupted supply of fresh bait for at least 15 (2 1/2) or until signs of mouse activity cease.

**FOLLOW UP:**

Place contaminated or unopened bait immediately. Weighing glasses, collect and dispose of all dust, exposed empty and less exposed or leftover bait. To prevent contamination, limit sources of rodents food, water, and harborage as much as possible. If infestation does occur, repeat treatment. When a continuous source of infestation is present, establish permanent bait stations and replace as needed.

**FIRST AID**

**IF SWALLOWED:**

Call a poison control center, doctor, or 1-877-664-2494 immediately for treatment advice.

- Have a person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by the poison control center or doctor.

**IF IN EYES:**

Hold eyes open and flush eyes gently with water for 15-30 minutes.

- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.

IF INHALED:

- Move person to fresh air.
- Remove any breathing apparatus, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
- Call a poison control center or doctor for further treatment advice.

**IF SWALLOWED**

This material may reduce the toxicity of the food and cause vertigo. If ingested, administer Vitamin K₁, intravenously or orally as needed based on monitoring of prothrombin times.

**CAUTION:**

If Swallowed

- Call a poison control center, doctor, or 1-877-664-2494 at once.

- See side panels for First Aid and additional precautionary statements, and Directions for Use.
