Thousands of hours of groundbreaking laboratory and field research have gone into the product you are holding. Motomco Mole Killer has been carefully designed to mimic the natural food sources of the mole. To achieve maximum effect, MOTOMCO MOLE KILLER should only be placed in areas used habitually by moles for feeding.

**SELECTION OF TREATMENT AREAS:**
Moles construct deeper tunnels that are not visible underground in either main underground runways or in subsurface feeding tunnels. This bait may not be used above ground. Wear gloves when bait is handled.

**APPLICATION DIRECTIONS:**

**SUBSURFACE RUNWAYS:**

- Use your finger, small wooden dowel or a narrow rod to puncture a hole in the top of the runway with a rod slightly larger than the diameter of the bait.
- Cover the hole with a piece of sod, a small rock or a piece of newspaper to allow for the bait to completely enter the tunnel.
- Make a hole in the top of the runway with a rod slightly larger than the diameter of the bait.
- Place grub shaped bait according to use directions below.
- **ADDITIONAL GRAPHICS AND TEXT.**

**BAITING ACTIVE RUNWAYS:**

- Five (5) to 7 days after bait application, check for mole activity using the same procedure for determining tunnel location. Return 48 to 72 hours later and retreat all active tunnel systems.

**DETERMINING BAITING RESULTS:**

- The presence of moles may be indicated by a network of subsurface runways in the turf or by a series of conical mounds of earth pushed up from deep burrows. Subsurface runways are indicated by raised ridges under the turf or by a series of conical mounds of earth pushed up from deep burrows.
- Active runways can be identified by the presence of intact runways, mounds or mounds with a hole in the center.

**KEEP OUT OF REACH OF CHILDREN**

**CAUTION:**

- Grub shaped bait must be baited where it will not be accessible to children, pets and non-target animals.
- Always reseal opened containers by pinching hole closed. If not possible, cover with a small rock.
- This product may only be used to control moles above ground.
- Do NOT use this product above ground.
- Do NOT use this product below ground.
- This product may only be applied at the use sites and by the application methods indicated on this label. This product may only be used in lawns and around homes to control eastern moles (Scapillus sciurus), star-nosed moles (Eulystmus fuscus) or woodchucks (Marmota monax).
- This product is extremely toxic to mammals and birds. Dogs and other predatory and scavenging mammals and birds might be poisoned if they feed upon animals that have eaten this bait. Do not apply directly to water.
- Prolonged or frequent repeat skin contact may cause allergic reactions in some individuals.
- Hazards to Humans and Domestic Animals

**FIRST AID:**

- If an animal eats bait, call veterinarian or 1-877-854-2494 at once.
- This bait contains the nerve poison Bromethalin. This is not an anticoagulant type rodenticide. For humans or animals ingesting bait and/or showing poisoning signs (such as muscle tremors, loss of hind leg function, потеря равновесия, loss of vision, loss of hearing, drooping of eyelids, yawning, vomiting, general weakness), give the animal the following treatments:
  - Do not induce vomiting unless told to do so by the poison control center or doctor.
  - Have person sip a glass of water if able to swallow.
  - Wash with plenty of soap and water.
  - **See bottom panel for additional precautionary statements.**

**HOW TO USE MOTOMCO MOLE KILLER GRUB FORMULA**

**Grub Formula**

- Mimics a Mole’s Natural Food Source

This Product May Only be Used to Control Moles

**Harmful if swallowed or absorbed through the skin. Keep away from children, domestic animals and pets. Do not get in eyes, on skin, or on clothing.**
MOTOMCO FARM & HOME

SPECIMEN LABEL

MOLE KILLER

or more days from the time of bait consumption for moles to die. Moles may consume a lethal dose in a single feeding, but it may take two or more days from the time of bait consumption for moles to die.

Read this entire label and follow all use directions and use precautions.

accidents:
1. Store product not in use in locations out of the reach of children and pets.
2. Follow all application methods and use sites indicated on this label.
3. Do NOT use this product above ground.
4. Dispose of product container and unused or spoiled product as specified on label.

This product may only be applied at the use sites and by the application methods indicated on this label. This product may only be used in lawns and around homes to control eastern moles (Scalopus aquaticus). Moles construct deeper tunnels that are not visible from the surface. These deep tunnels systems are often marked by a series of conical mounds (piles of dirt) 4 to 12 inches in diameter 9 to 12 inches apart. The presence of moles may be indicated by a network of subsurface runways in an area or by piles of dirt pushed to the surface when moles construct these tunnels. To locate deep tunnels, push a probe, such as a narrow rod, through a mound, and the dirt will fall out. Runway entrances are usually near or in these mounds.

SELECTION OF TREATMENT AREAS:

APPLICATION DIRECTIONS:

 Remove and place grub shaped bait according to use directions below and ADDITIONAL GRAPHICS AND TEXT. Bait must be applied directly into moles' burrow systems. This bait must be applied at bait stations inside and in the runways of the system. This bait is not effective when applied at bait stations outside or above ground in areas that are not within the mole system. Place bait stations at either end of each system or every 10 to 12 feet within any system.

DETERMINING BAITING RESULTS:

Five (5) to 7 days after bait application, check for mole activity using the same method. If holes have been resealed or plugged within 72 hours of baiting, the runway will require reapplication with additional bait stations. If no new holes have been made, but the runway is active, bait stations should be repeated every 5 to 10 feet of each active runway. The presence of moles may be indicated by a network of subsurface runways in an area or by piles of dirt pushed to the surface when moles construct these tunnels. To locate deep tunnels, push a probe, such as a narrow rod, through a mound, and the dirt will fall out. Runway entrances are usually near or in these mounds.

To achieve maximum effect, MOTOMCO MOLE KILLER should only be placed in areas used habitually by moles for feeding. To bait deep tunnels, drop two MOTOMCO MOLE KILLER grubs (one placement) through the probe hole, using the probe to push the grubs to the bottom of the tunnel. For holes that are less than 2 inches in diameter, use one MOTOMCO MOLE KILLER grub. To bait active runways, place a small amount of bait in each runway. For example, place two MOTOMCO MOLE KILLER grubs in each 20 foot (6 meter) section of a runway. Repeat bait application every 5 to 10 feet of each active subsurface runway.

Moles construct deeper tunnels that are not visible from the surface. These deep tunnels systems are often marked by a series of conical mounds (piles of dirt) 4 to 12 inches in diameter 9 to 12 inches apart. The presence of moles may be indicated by a network of subsurface runways in an area or by piles of dirt pushed to the surface when moles construct these tunnels. To locate deep tunnels, push a probe, such as a narrow rod, through a mound, and the dirt will fall out. Runway entrances are usually near or in these mounds.

Environmental Hazards

Prolonged or frequent repeat skin contact may cause allergic reactions in some individuals. Anyone handling baits must wear gloves. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, smoking, or caring for animals. If an animal eats bait, call veterinarian or 1-877-854-2494 at once. Contains the nerve poison Bromethalin. This is not an anticoagulant type rodenticide. For humans or animals ingesting bait and/or showing poisoning signs (such as muscle tremors, loss of hind legs, paralysis, reduced breathing, or convulsions), immediately obtain medical treatment. New & Thorough Medical Care. Dehydration is a severe sign of cerebral edema and should be treated accordingly through administration of an osmotic diuretic and corticosteroid.

Harms to Humans and Domestic Animals

CAUTION:

Do not expose children to this product or use it for any purpose other than to control moles. To help prevent accidents:
1. Store product not in use in locations out of the reach of children and pets.
2. Follow all application methods and use sites indicated on this label.
3. Do NOT use this product above ground.
4. Dispose of product container and unused or spoiled product as specified on label.

This Product May Only be Used to Control Moles

OTHER USES:

This product is not intended as a general purpose pesticide or insecticide. It is not intended for or suitable for use as a general purpose pest control. This product is designed and tested to mimic a mole's natural food source. Moles may consume a lethal dose in a single feeding, but it may take two or more days from the time of bait consumption for moles to die. 

Hazards to Humans and Domestic Animals
