

Brandt® enTREE® 0-2.4*-2.6

Tree Injection Fertilizer

0-2.4*-2.6

Guaranteed Analysis

Total Phosphate (P ₂ O ₅)	2.4%
Soluble Potash (K ₂ O)	2.6%

Derived from potassium phosphite.

F76

Phosphorus acid products are for use as a supplemental fertilizer treatment.

*Upon foliar application, the phosphite ions are taken up directly by the plant foliage and may undergo a degree of conversion to phosphate ions, or will be used directly by plants as phosphite ions.

*As a soil application to annual crops, a lesser response from the initial crop, with a corresponding superior response from succeeding crops, may be observed. In addition, placement close to seeds or root zones may be injurious to crops. The effect may be aggravated by a soil pH below 6.5.

General Information

BRANDT enTREE products are designed for direct injection of nutrients to fruit, tree and vine crops for the prevention and correction of nutrient deficiencies when used as part of a balanced fertility program.

Using low pressure micro tree injection technology, BRANDT enTREE treats trees from the inside, gently dispersing nutrient formulations into the tree's vascular system. The injection units are ready to use: after drilling the hole in the tree trunk and inserting the connector, the unit can be attached in a variety of angles (upright, upside down, sideways, etc.).

To ensure maximum efficacy and absorption, it is important for BRANDT enTREE 0-2.4*-2.6 to be applied in the proper location on the tree. For single trunk trees, the application should be at least 20 inches (60 cm) below the lowest branch. For trees with split trunks, the application should be applied to each trunk.

Rate Recommendations

Measure the diameter of the tree at breast height by using diameter tape, or by measuring the circumference and dividing by three (3). Take the diameter of the tree and divide by five (5). This is the number of injection units that will be needed to treat the tree. If the tree has multiple trunks at breast height, measure each trunk's diameter and add together to get cumulative diameter.

Net Contents:

12 x 200 mL injector units
Density: 8.5 lb/gal @ 68°F
Net Weight: 5.3 lb (2.4 kg)

32058BRN659
2018-08

In the event the tree has multiple trunks that separate less than three (3) feet from the ground (e.g. avocado, citrus, peach, etc.), each individual trunk must be treated separately to ensure equally homogenous distribution of solution to all parts of the tree. In this instance, each individual trunk must be measured in the same way as if the trunk were standing individually.

Restrictions

DO NOT inject trees that are heat or moisture stressed, or in a state of dormancy.

DO NOT inject newly established trees and/or trees that are less than five inches DBH or 15 inches in circumference.

DO NOT exceed calculated number of BRANDT enTREE injection units per tree.

Apply once per year.

Handling Instructions

Refer to the BRANDT enTREE Application Instruction sheet enclosed in this box.

Information regarding the contents and levels of metals in this product is available on the Internet at <http://www.aapco.org/metals.html>
Information about the components of this lot of fertilizer may be obtained by writing to Brandt Consolidated, Inc. and giving the lot number which is found on the container or label.

Precautionary Statements: Based on currently available data, this product is not classified as a hazardous substance. However, observe good industrial hygiene practices. Wash hands after handling. **Storage and Disposal:** Do not contaminate water, food or feed by storage or disposal. Keep out of reach of children. Store away from incompatible materials. Dispose of contents/container in accordance with local authority requirements.
