GRIGG® SK-BALANCE™

0-0-24

GRIGG SK-Balance is a greens grade micro-granular that contains 24% soluble potash, 11% calcium and 16% sulfur. It is recommended for monthly, in-season use to maintain turf strength and vigor during periods of heavy use.

Key Advantages

- Provides soluble, efficient nutrients
- Small particle size can pass through 200 mesh sieve
- Soluble potassium is derived from sulfate of potash. Potassium regulates primary physiological processes that impact turf response to stress and supports cellular processes that impact photosynthesis, water regulation, respiration and protein production.
- Gypsum-derived calcium is recommended for alkaline or sodic soils. Calcium is important for cell wall strength.

Application and Use

General Maintenance of Cool and Warm Season Grasses:
Apply 3-6 lb per 1,000 sq ft or 131-261 lb per acre [1.5-3 kg per 100 sq m or 146-292 kg per hectare] as needed.

Make frequent applications at lower rates, or apply higher rates for greater plant demand. Optimum rate of application will vary depending on treatment interval, soil properties (such as pH, organic matter content, texture), weather conditions, time of year, plant species and its nutrient requirements. For best results, follow soil/tissue test recommendation.
